

GRIZZLY: MECHANICAL LOCKER

OVERVIEW OF A GRIZZLY

Yukon Grizzly Locker is an automatic, speed sensing locker. It will lock up when there is a wheel speed difference side-to-side. They are fitted with internal components that allow for differentiation in turns. Automatic lockers are very popular in the four-wheeling world and are touted for leaving the driver to concentrate on other elements of driving and letting the locker figure out when to engage. Automatic lockers are also used on performance cars, most commonly for acceleration.

PRODUCT ADD-ON OPPORTUNITIES

When a Grizzly Locker is sold, it is beneficial to sell a carrier installation kit.

This kit will include new carrier bearings and shims which should be replaced to insure optimal performance of the Grizzly Locker and make the installation easier. A complete Differential Installation Kit is also a good alternative option since it will replace all bearings and seals in the differential.

YUKON GEAR & AXLE

Grizzly Locker

Mechanical positive-locking differentials have been the staple for drag racing, circle track racing, off-road use and a variety of other performance applications for decades. We're proud to introduce the Grizzly Locker, the latest in locking differentials. The Grizzly Locker features an 8620 case, forged 8620 internals and a patented design which reduces common locker failures. The inner clutch teeth have an improved design, with a larger radius at the base, improving strength over back-cut designs. Larger teeth help to avoid breakage against shock-loading or in the event an axle breaks. The internals are hand fitted, for faster engagement. These units provide maximum traction and strength for many performance applications. Grizzly Lockers are available for a variety of car & truck applications, with new applications being added all the time! ASSEMBLED IN THE USA!
