TRANSFER CASE IDENTIFICATION FIRST DESIGN VS. SECOND DESIGN

INTERIM MODEL YEAR DESIGN CHANGE - NQF/NQG/NQH/NPO FRONT OUTPUT SHAFT, DEFLECTOR, SEAL

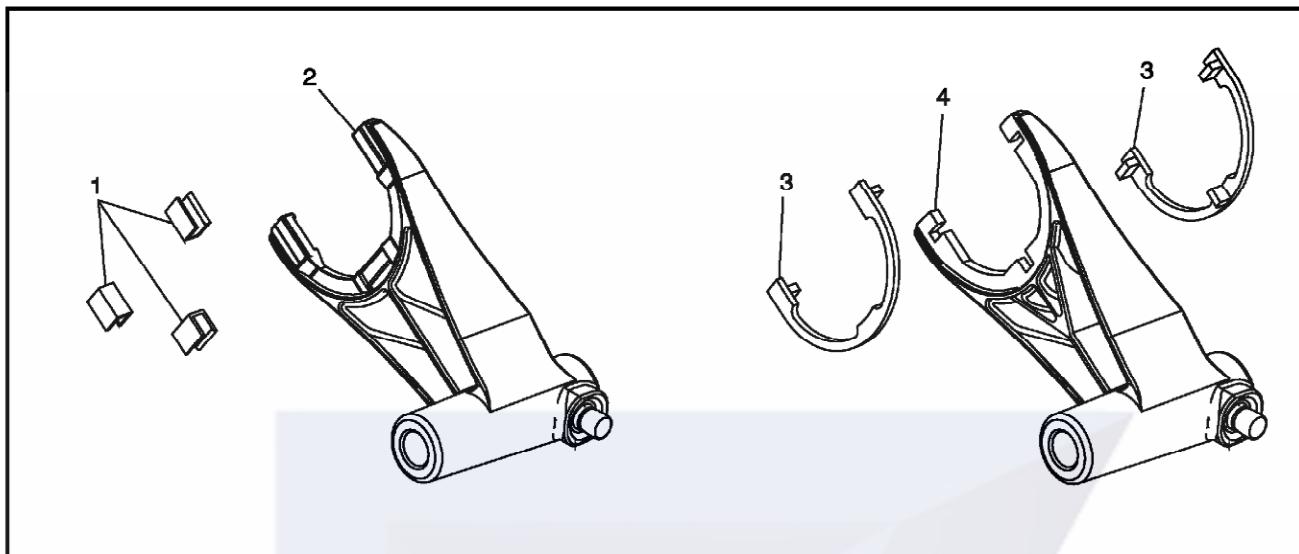

Interim 2012 model year, a new design front output shaft deflector (3) was implemented into production for second design NQF-HD/SHD and NQG-HD applications. First design 2011 model year NQF and NQG applications can be identified as not having the deflector on the front output shaft.

For service, the new design front output shaft, deflector and new design seal may be installed on current and prior model year Magna NQF-HD/SHD, NQG-LD/HD, NQH-LD/HD and NP0 applications providing the new design front output shaft is also installed. The front output shaft deflector is to be installed using the **J 8092** driver handle (1) and **DT 50649** seal installer (2).

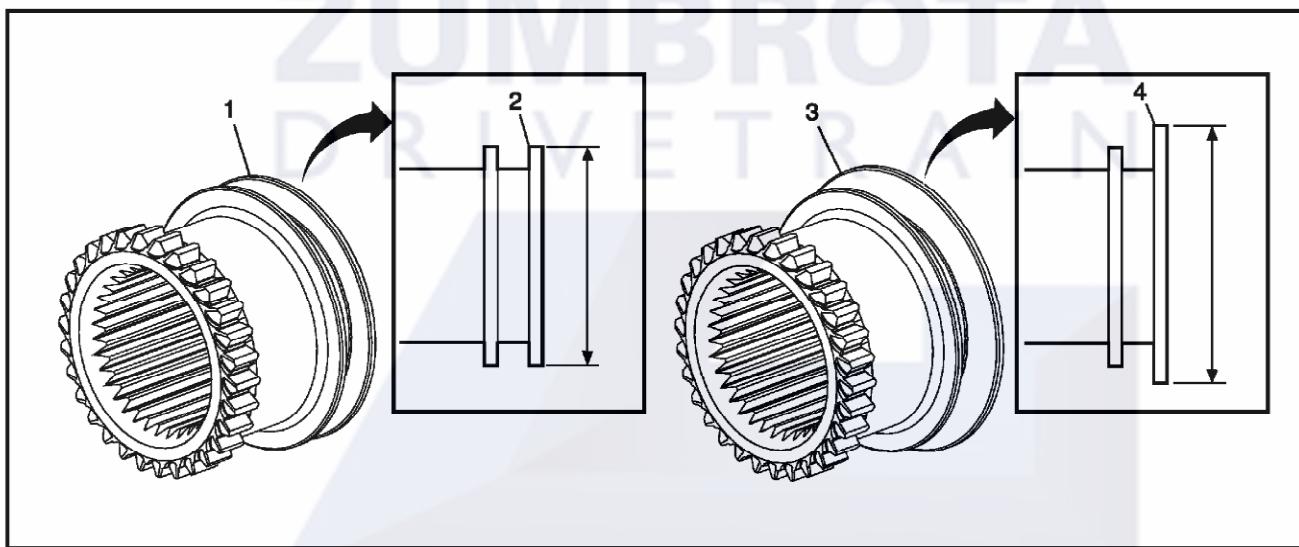

The new design deflector (1) can be installed onto all current and prior model year Magna RPOs NQF, NQG, NQH and NPO applications providing the new design front output shaft (2) is also installed. Second design front output shafts can be identified by the machined area on the OD output end of the shaft (2). First design front output shafts can be identified by the dust boot clamp groove (3) located at the OD output end of the shaft. The new design slinger will NOT install onto the first design shafts.

INTERIM MODEL YEAR DESIGN CHANGE - NQG HIGH/LOW SHIFT FORK, FORK PAD, AND HIGH/LOW CLUTCH

Interim 2012 model year the High/Low shift fork, fork pad and High/Low clutch design changed. The first design forks (2) can be identified as having three flat un-notched fork pad areas with three separate fork pads (1). The second design forks (4) can be identified as having a half-round shaped pad area with three notches for pad orientation and installation and upper and lower half-round fork pads (3). The second design shift fork (4) and pads (3) are the only design available for service and must be used with the second design High/Low clutch.

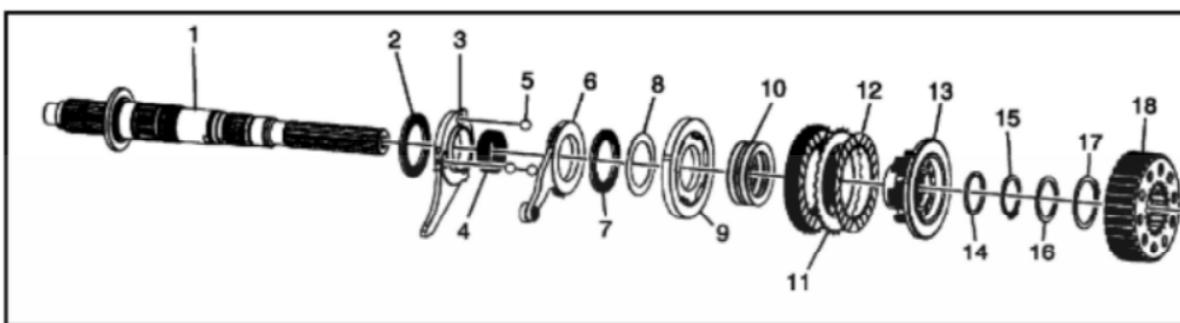

Interim 2012 model year the High/Low shift fork, fork pad and High/Low clutch design changed. The first design high/low clutch (1) can be identified by having a 73 mm (2.87 in) OD rear flange (2). The second design high/low clutch (3) can be identified by having a 76 mm (2.99 in) OD rear flange (4).

For service:

- The first design 73 mm (2.87 in) high/low clutch may NOT be used with the second design fork and pad.
- The second design 76 mm (2.99 in) high/low clutch must be used with the second design fork and fork pad.
- The second design 76 mm (2.99 in) high/low clutch may also be used with the first design fork and pad if first design fork replacement is not required.

SERVICE PARTS RELEASE USAGE CHANGE-NQH/NPO CONTROL ACTUATOR LEVERS

Light Duty (LD) 2007-2010 MP3023-NQH and 2010 MP3010-NP0 production transfer cases are built with LD control actuator levers (3 and 6) and are used with 13 mm (0.52 in) diameter control actuator lever balls (5).

Heavy duty (HD) 2007-2010 MP3024-NQH production transfer cases are built with HD control actuator levers (3 and 6) and are used with Heavy 10 mm (0.39 in) control actuator lever balls.

When replacement of one or both of the LD control actuator levers is required, it is necessary to replace both of the levers and all three balls with the HD components as a set. It is also necessary to re-measure and adjust clutch pack clearances as required and to perform the Transfer Case High/Low Clutch Reset. Refer to Measuring/Adjusting Clutch Assembly Height in Transfer Case Assemble, Transfer Case Description and Operation and Transfer Case High/Low Clutch Reset. Heavy duty (HD) components are the only parts available for service.

INTERIM MODEL YEAR DESIGN CHANGE - NQF/NQG/NQH FRONT CASE HALF ASSEMBLY, INPUT SHAFT, PLANETARY CARRIER HIGH/LOW CLUTCH

Interim 2012 model year for Magna light-duty and heavy-duty transfer case RPOs NQF / NQG / NQH, a second-design front case half assembly, planetary internal gear, gear retaining ring, locking plate, thrust washer-front, input shaft, pilot bearing, thrust washer-rear, high/low planetary carrier and high/low clutch were implemented into second-design assemblies.

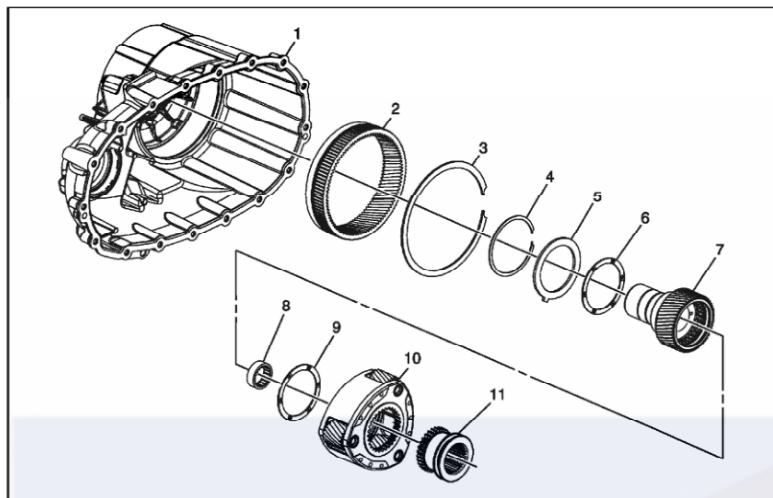

The second-design light duty (LD), heavy duty (HD), and super-heavy duty (SHD) applications have a reduced OD dimension carrier and the second-design planetary internal gear has a reduced ID dimension. The planetary internal gear is a press-fit non-serviceable component and must be serviced with the front case half assembly. In service it is possible that a new or remanufactured transfer case may contain first or second-design content.

If a second-design transfer case has been installed into a vehicle that originally contained a first-design assembly, TCCM reprogramming is not required.

For production, the following transfer cases variations were produced:

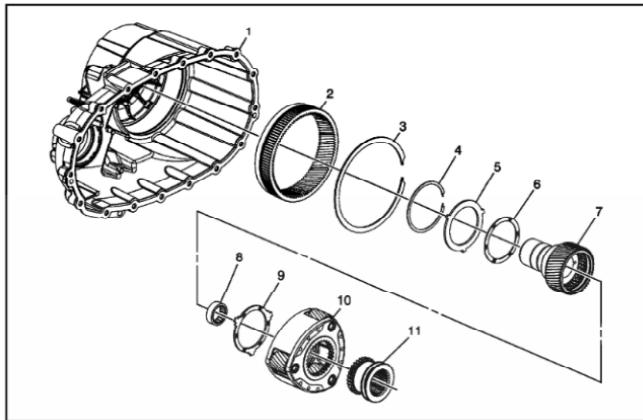

- 2007-12i Magna LD NQG/NQH - produced with first-design content. First design service components are available. A second-design assembly may be used for back-service in a first-design application.
- 2007-10 Magna HD NQF - produced with only first-design content. Service components are available.
- 2007-10 Magna HD NQG - produced with only first-design content. Service assemblies may contain either first or second design content. Both first and second design service components are available.
- 2007-12i Magna HD NQH - produced with first-design content. First design service components are available. A second-design assembly may be used for back-service in a first-design application.
- 2011-12i Magna SHD NQF/NQG - produced with first design content. First design service components are available. A second-design assembly may be used for back-service in a first-design application.
- 2012i-13 Magna LD NQG/NQH - produced with second-design content. Second design service components are available.
- 2012i-13 Magna HD NQH - produced with second-design content. Second design service components are available.
- 2012i-13 Magna SHD NQF/NQG - produced with second-design content. Second design service components are available.

SERVICE PARTS LIST

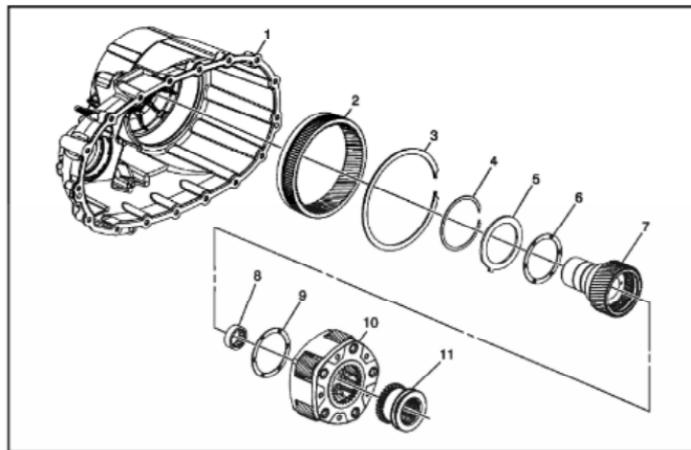

Magna Light Duty NQG/NQH/NP0 - First Design

Callout	Description	GM PN	Service Usage
1	Front Case Half Assembly - w/gear (2) and ring 3)	19132998	NQH
1	Front Case Half Assembly - w/gear (2) and ring (3)	19133000	NQG

FRONT CASE HALF IDENTIFICATION

The first design front case half assembly can be identified as having an internal gear that is a 94 tooth design with an inside diameter (a) of 148.5 mm (5.85 in).

The second design front case half assembly can be identified as having an internal gear that is a 91 tooth design with an inside diameter (a) of 142 mm (5.59 in).

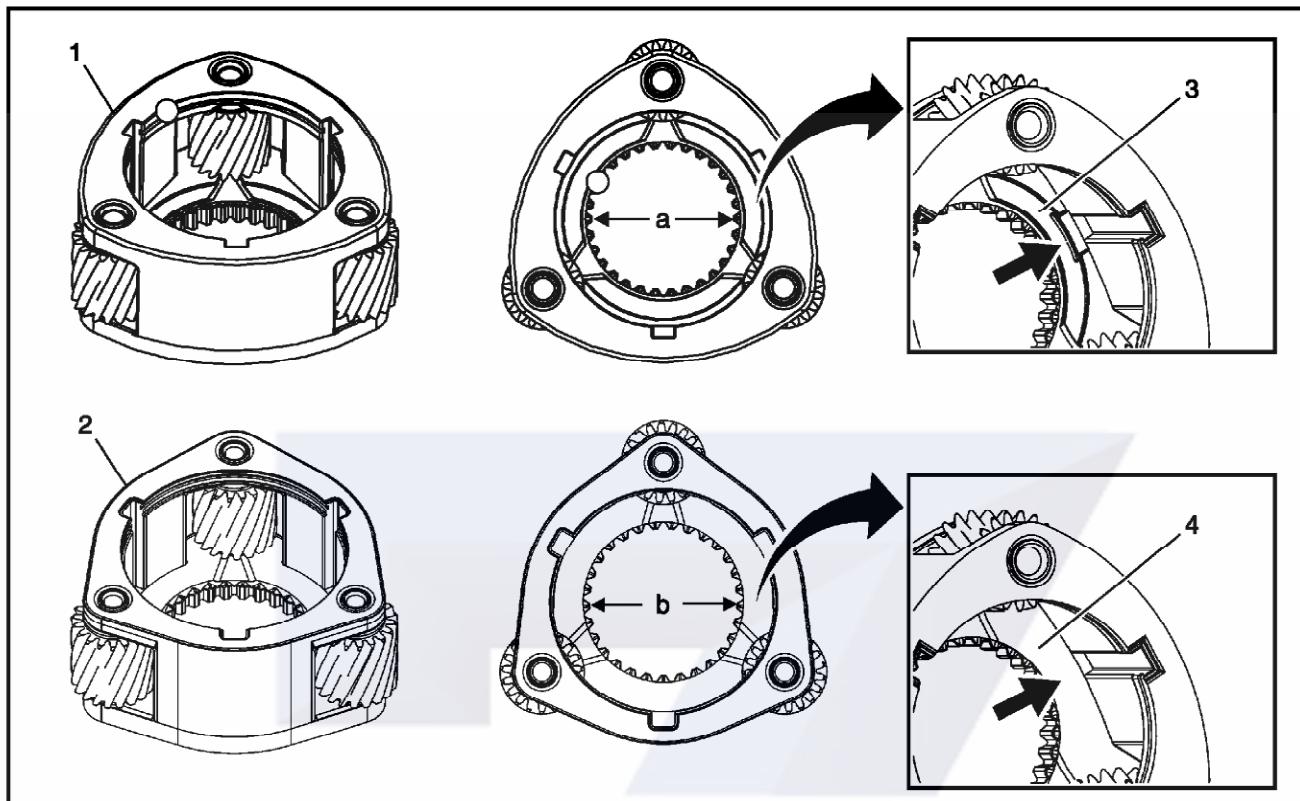

INPUT SHAFT IDENTIFICATION

The first design input shaft can be identified as a 56 tooth design with an outside diameter (a) of 91.4 mm (3.60 in).

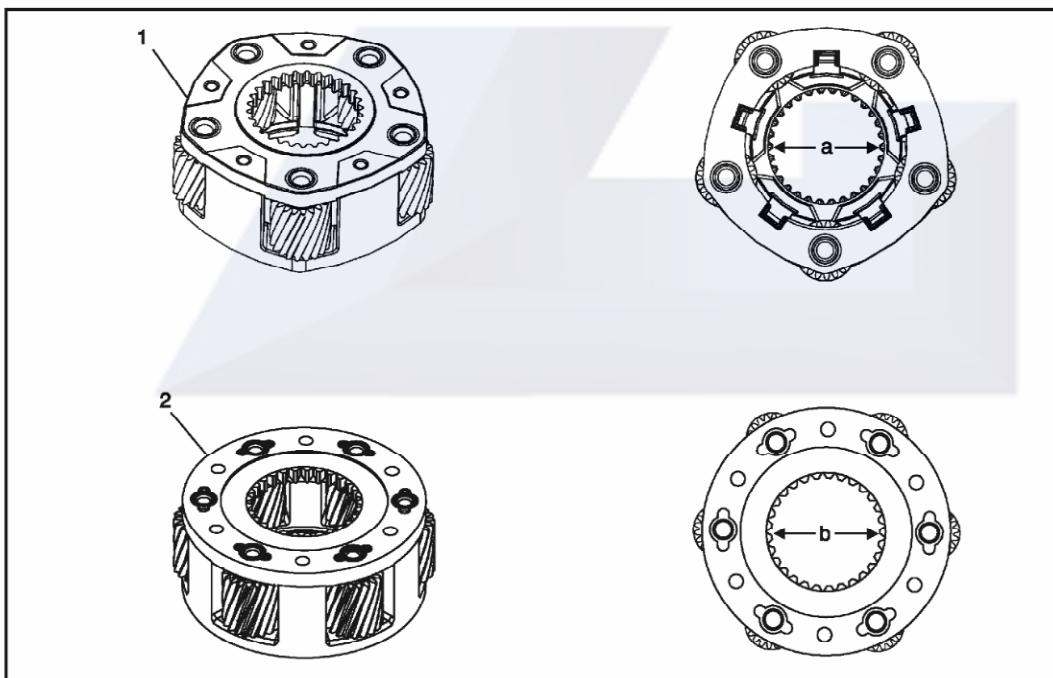

The second design input shaft can be identified as a 53 tooth design with an outside diameter (a) of 87.50 mm (3.44 in).

HIGH/LOW PLANETARY CARRIER ASSEMBLY IDENTIFICATION

The first-design light-duty 3-pinion high/low planetary carrier (1) can be identified as having a 30 tooth design with an inside diameter (a) of 61.3 mm (2.41 in). In addition, the first-design carrier can also be identified by the presence of a recessed washer pocket (3) at the rear thrust washer location.

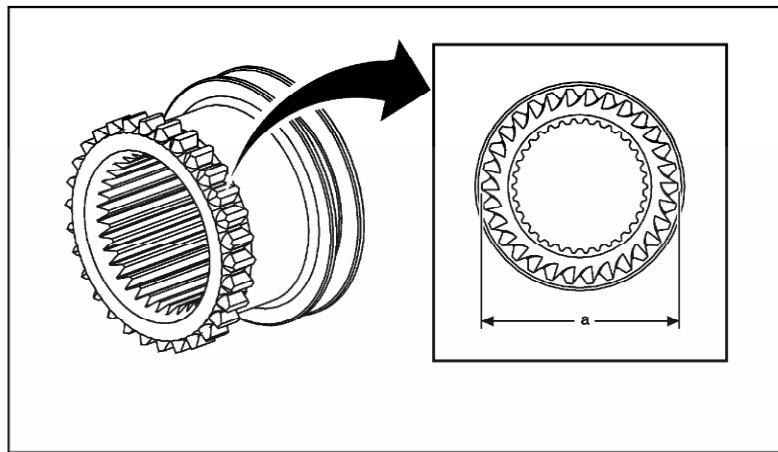

The second-design light-duty 3-pinion high/low planetary carrier (2) can be identified as having a 29 tooth design with an inside diameter (b) of 60.2 mm (2.37 in). In addition, the second-design carrier can also be identified by the lack of a recessed washer pocket (4) at the rear thrust washer location.

The first-design heavy-duty 5-pinion high/low planetary carrier (1) can be identified as having 5 pinions and a 30 tooth design with an inside diameter (a) of 61.3 mm (2.41 in).

The second-design heavy-duty 6-pinion high/low planetary carrier (2) can be identified as having 6 pinions and a 29 tooth design with an inside diameter (b) of 60.2 mm (2.37 in).

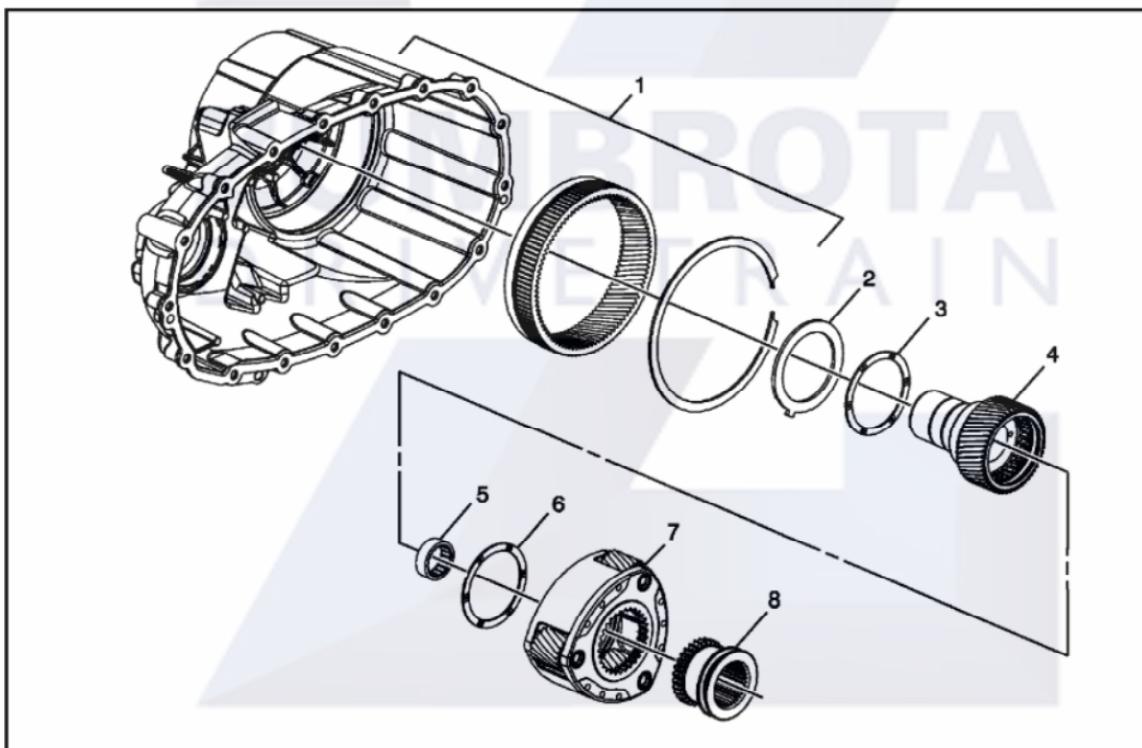

HIGH/LOW CLUTCH

The first design high/low clutch can be identified as having a 30 tooth design with a gear tooth outside diameter (a) of 65.50 mm (2.58 in).

The second design high/low clutch can be identified as having a 29 tooth design with a gear tooth outside diameter (a) of 63.25 mm (2.49 in).

COMPONENT REPLACEMENT - CONVERSION FROM FIRST DESIGN TO SECOND DESIGN

It is possible to repair a first-design assembly using second-design components. Refer to the parts catalog and the tables above for component part number clarification.

NOTE: First-design LD components are shown in the view above.

When servicing a first-design assembly with second-design components, the following components MUST be replaced as a group:

1. Front Case Half Assembly - with internal gear and retaining ring
2. Locking Plate
3. Thrust Washer (front)
4. Input Shaft
5. Pilot Bearing
6. Thrust Washer (rear)
7. Planetary Carrier Assembly
8. High/Low Clutch

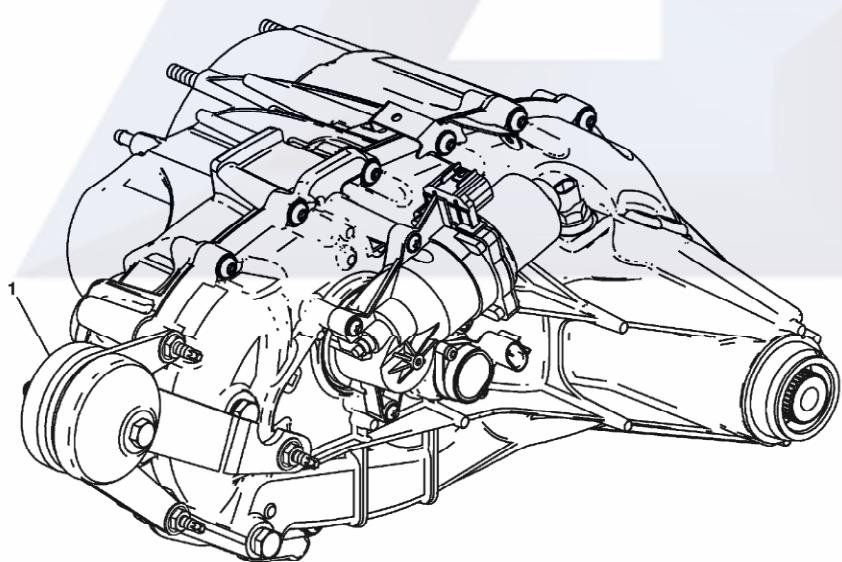

PRODUCTION ASSEMBLY BREAKPOINTS

The design level and component content of the transfer case can be determined by referencing the assembly part number located on the identification label.

2014 NQH/NPO/NQG-LD Model Year Design Change - Addition of a Tuned Vibration Adapter (dampener) for V-6 Engine RPO LV3 Applications

Beginning in 2014 model year for V-6 engine RPO LV3 applications, a dampener (1) has been added to the exterior of the NQH and NQG-LD transfer cases.

MP 1222/1225/1226 Build Variations

The NQG transfer case is available in 7 variations, depending on the year, and transmission configuration. When servicing the transfer case it is important to understand which variation is being serviced because of the different internal components.

MP 1222/1225/1226 Variations

Year / Model	Transmission	Input Shaft	Output Shaft	Chain Size	Chain Series	Hi/Low Planetary	Application
2007-14 MP 1222 (LD) Light Duty	M30 - 4L60-E	27 Spline	32 Spline	7/16 X 1.25 in	9600 Series Rocker Pin Chain	3 Pinion	K1
2007-14 MP 1222 (LD) Light Duty	MYC- 6L80-E	32 Spline	32 Spline	7/16 X 1.25 in	9600 Series Rocker Pin Chain	3 Pinion	K1
2007-14 MP 1225 (HD) Heavy Duty	MYD- 6L90-E	29 Spline	31 Spline	7/16 X 1.5 in	9600 Series Rocker Pin Chain	5 Pinion	K2
2007-10 MP 1225 (HD-Canadian) Heavy Duty	MYD- 6L90-E	29 Spline	31 Spline	7/16 X 1.5 in	2300 Series Round Pin Chain	5 Pinion	K2 - Canadian
2007-10 MP 1226 Super Heavy Duty (SHD)	MYD- 6L90-E MW7- Allison	29 Spline	31 Spline	7/16 X 1.5 in	2300 Series Round Pin Chain	5 Pinion	K2-W/MW7 K3 - All
2011-14 MP 1225 (HD) Heavy Duty	MYD- 6L90-E	29 Spline	31 Spline	7/16 X 1.5 in	2300 Series Round Pin Chain	5 Pinion	K2-Canadian K3 - All
2011-14 MP 1226 Super Heavy Duty (SHD)	MW7- Allison	33 Spline	31 Spline	7/16 X 1.5 in	2300 Series Round Pin Chain	5 Pinion	K2, K3

Internal Components

MP1222 LD with 27T Input Spline

- The high/low clutch has bias pointing engagement teeth. The leading edges of the teeth are not symmetric.

MP1222 LD with 32T Input Spline

- The high/low clutch has neutral pointing engagement teeth. The leading edges of the teeth are symmetric.

MP1222 LD Common with either 27T or 32T Input Spline

- The rear output shaft seal is smaller, the inner lip diameter measures 46.2 mm (1.819 in).
- The rear output shaft bushing is smaller, the inner diameter measures 48 mm (1.890 in).
- The rear case half has smaller bores to accommodate the rear output shaft seal and the rear output shaft bushing.
- The input shaft pilot bearing assembly is smaller than the MP 1225/1226 to accommodate the smaller rear output shaft. The outer diameter measures 38.1 mm (1.5 in).
- The rear output shaft is smaller.
- The front output shaft drive sprocket is 31.75 mm (1.25 in) wide.
- The front output shaft driven sprocket is 31.75 mm (1.25 in) wide.
- The rear output shaft rear bearing retaining rings are smaller, the outer diameter of the ring groove at the rear output shaft measures 37.5 mm (1.476 in)
- The rear output shaft rear bearing assembly is smaller. The inner diameter measures 40 mm (1.575 in).
- The HI/LO planetary is a 3 pinion design.

MP 1225

The input shaft seal is a single lip seal used only with dry cavity adapters.

MP 1226

The input shaft seal is a dual lip seal used specifically for the MW7 which has a wet cavity adapter, these seals are also used for the MYD in order to retain a common part number for this model.

MP 1225/1226 HD/SHD Common

- The input shaft pilot bearing assembly is larger to accommodate the larger rear output shaft, the outer diameter measures 41.275 mm (1.625 in)
- An input shaft pilot bearing retaining ring is used.
- The high/low planetary is a 5 pinion design.
- The high/low clutch has neutral pointing engagement teeth. The leading edges of the teeth are symmetric.
- The front output shaft drive sprocket is 38.1 mm (1.5 in) wide.
- The front output shaft driven sprocket is 38.1 mm (1.5 in) wide.
- The thrust washer with internal notched area and anti-rotational pin are a new design for 2011-up 1225HD and 1226SHD applications only.
- The rear output shaft is larger diameter.
- The rear output shaft rear bearing retaining rings are larger, the outer diameter of the ring groove at the rear output shaft measures 38.5 mm (1.516 in).
- The rear output shaft rear bearing assembly is larger, the inner diameter measures 41 mm (1.614 in).
- The rear output shaft seal is larger, the inner lip diameter measures 54.2 mm (2.134 in).
- The rear output shaft bushing is larger, the inner diameter measures 56.08 mm (2.208 in).
- The rear case half has larger bores to accommodate the larger rear output shaft seal and the rear output shaft bushing.

All Applications

- Double lip input shaft oil seals are used on applications with a WET adapter cavity and with 4 speed transmission RPOs M30/M70/MW7/ML9 only.
- Single lip input shaft oil seals are used on applications with a DRY adapter cavity and with 6 speed transmission RPOs MYC/MYD only.

Front Output Shaft Slinger

Interim 2011 model year, a new design front output shaft slinger was implemented into production for second design NQF and NQG applications. First design 2011 model year NQF and NQG applications can be identified as not having the slinger on the front output shaft.

For service, the new design front output shaft slinger may be installed on current and prior model year NQF, NQG, NQH, and NP0 providing the new design front output shaft is also installed.

The front output shaft slinger is to be installed using front output shaft seal installer.

Second design front output shafts can be identified by the machined area on the OD of the shaft.

MP 1625/1626 Variations

Year / Model	Transmission	Input Shaft	Output Shaft	Chain Size	Chain Series	Hi/Low Planetary	Application
2007-14 MP 1625 (HD) Heavy Duty	MYD- 6L90-E	29 Spline	31 Spline	7/16 X 1.5 in	9600 Series Rocker Pin Chain	5 Pinion	K2
2007-10 MP 1625 (HD-Canadian) Heavy Duty	MYD- 6L90-E	29 Spline	31 Spline	7/16 X 1.5 in	2300 Series Round Pin Chain	5 Pinion	K2 - Canadian
2007-10 MP 1626 Super Heavy Duty (SHD)	MYD- 6L90-E MW7-Allison	29 Spline	31 Spline	7/16 X 1.5 in	2300 Series Round Pin Chain	5 Pinion	K2-W/MW7 K3 - All
2011-14 MP 1625 (HD) Heavy Duty	MYD- 6L90-E	29 Spline	31 Spline	7/16 X 1.5 in	2300 Series Round Pin Chain	5 Pinion	K2-Canadian K3 - All
2011-14 MP 1626 Super Heavy Duty (SHD)	MW7-Allison	33 Spline	31 Spline	7/16 X 1.5 in	2300 Series Round Pin Chain	5 Pinion	K2, K3

Additional differences in these models are listed below:

All Applications

- Double lip input shaft oil seals are used on applications with a WET adapter cavity and with 4 speed transmission RPOs M30/M70/MW7/M99/ML9 only.
- Single lip input shaft oil seals are used on applications with a DRY adapter cavity and with 6 speed transmission RPOs MYC/MYD only.

MP 3023/3024 Build Variations

The NQH transfer case is available in 4 variations, depending on the engine and transmission configurations. The variations allow the transfer case to handle different torque loads. When servicing the transfer case, it is important to understand which variation is being serviced because of the different internal components.

MP 3023/3024 ATC Variations

Model	Transmission	Input Shaft	Output Shaft	Chain Size	Chain Series	Hi/Low Planetary	Rear mainshaft bearing	Application
MP 3023 ATC Light Duty (LD)	M30 - 4L60-E	27T Spline	32T Spline	7/16 x 1.25 in	9600 Series Rocker Pin Chain	3 Pinion	1.575" I.D.	K1
MP 3023 ATC Light Duty (LD)	MYC-6L80-E	32T Spline	32T Spline	7/16 x 1.25 in	9600 Series Rocker Pin Chain	3 Pinion	1.575" I.D.	K1
MP 3023 ATC Light Duty (LD)	M99 - Hybrid	32T Spline	32T Spline	7/16 x 1.25 in	9600 Series Rocker Pin Chain	3 Pinion	1.378" I.D.	K1
MP 3024 ATC Heavy Duty (HD)	MYD - 6L90	29T Spline	31T Spline	7/16 x 1.5 in	9600 Series Rocker Pin Chain	5 Pinion	1.614" I.D.	K2

MP3023 LD ATC with M30-4L60E/M70-4L70E (27 spline input)

- The high/low clutch has bias pointing engagement teeth. The leading edges of the teeth are not symmetrical.
- The rear output shaft rear bearing retaining rings are larger ID than the MP 3023 ATC/M99 - Hybrid with 32T input splines but smaller than the MP 3024. The inner diameter of the ring groove at the rear output shaft measures 37.5 mm (1.476 in).
- The rear output shaft bearing assembly inner diameter measures 40 mm (1.575 in). The width measures 18 mm (0.709 in).
- The rear output shaft bearing assembly surface on the rear output shaft measures 40 mm (1.575 in).

MP3023 LD ATC with MYC-6L80E (32 spline input)

- The high/low clutch has neutral pointing engagement teeth. The leading edges of the teeth are symmetrical.
- The rear output shaft rear bearing retaining rings are larger ID than the MP 3023 ATC/M99 - Hybrid with 32T input splines but smaller than the MP 3024. The inner diameter of the ring groove at the rear output shaft measures 37.5 mm (1.476 in).
- The rear output shaft bearing assembly inner diameter measures 40 mm (1.575 in). The width measures 18 mm (0.709 in).
- The rear output shaft bearing assembly surface on the rear output shaft measures 40 mm (1.575 in).

MP3023 LD ATC with M99-Hybrid (32 spline input)

- The high/low clutch has neutral pointing engagement teeth. The leading edges of the teeth are symmetrical.
- The speed reluctor wheel profile thickness is thinner than the MP 3023 ATC with 27T input spline and the MP 3024, measuring 25.8 mm (1.016 in) thick.
- There is no snap ring between the speed reluctor wheel and the rear output shaft rear bearing assembly.
- The rear output shaft rear bearing retaining ring is smaller than the MP 3023 ATC with 27T input spline and the MP 3024. The inner diameter of the ring groove at the rear output shaft measures 33 mm (1.299 in).
- The rear output shaft bearing assembly inner diameter measures 35 mm (1.378 in). The width measures 23 mm (0.906 in).
- The rear output shaft bearing assembly surface on the rear output shaft measures 35 mm (1.378 in).

MP3023 LD ATC (with either 27T and 32T input shaft splines)

- The rear output shaft seal is smaller than the MP 3024 ATC. The inner lip diameter measures 46.1 mm (1.815 in).
- The rear output shaft bushing is smaller than the MP 3024 ATC. The inner diameter measures 48 mm (1.890 in).
- The rear case half has smaller bores than the MP 3024 ATC in order to accommodate the smaller rear output shaft seal and the rear output shaft bushing.
- There is an additional external wire harness bracket for the 32T application.
- The input shaft pilot bearing assembly is smaller than the MP 3024 ATC in order to accommodate the smaller rear output shaft. The bearing outer diameter measures 38.1 mm (1.5 in).
- The rear output shaft is smaller than the MP 3024 ATC.
- The front output shaft drive sprocket is 27.2 mm (1.071 in) wide.
- The front output shaft driven sprocket is 29.4 mm (1.157 in) wide.
- The control lever is thinner than the MP 3024 ATC, measuring 9.5 mm (0.374 in) between the bearing surfaces.
- The control actuator lever is thinner than the MP 3024 ATC, measuring 9.5 mm (0.374 in) between the bearing surfaces.
- The control actuator lever balls are larger than the MP 3024 ATC, measuring 13 mm (0.512 in) in diameter.
- The control actuator lever washer is thinner than the MP 3024 ATC, measuring 1 mm (0.039 in).

MP3024 HD ATC with MYD-6L90E (29 spline input)

- The rear output shaft seal is larger than the MP 3023 ATC. The inner lip diameter measures 53.8 mm (2.118 in).
- The rear output shaft bushing is larger than the MP 3023 ATC. The inner diameter measures 56.08 mm (2.208 in).
- The rear case half has larger bores than the MP 3023 ATC in order to accommodate the larger rear output shaft seal and the rear output shaft bushing.
- The input shaft pilot bearing assembly is larger than the MP 3023 ATC in order to accommodate the larger rear output shaft. The bearing outer diameter measures 41.275 mm (1.625 in).
- An input shaft pilot bearing retaining ring is used.
- The high/low clutch has neutral pointing engagement teeth. The leading edges of the teeth are symmetric.
- The rear output shaft is larger than the MP 3023 ATC.
- The front output shaft drive sprocket is 33.5 mm (1.319 in) wide.
- The front output shaft driven sprocket is 35.5 mm (1.398 in) wide.
- The rear output shaft rear bearing retaining rings are larger than the MP 3023 ATC. The inner diameter of the ring groove at the rear output shaft measures 38.5 mm (1.516 in).
- The rear output shaft rear bearing assembly inner diameter measures 41 mm (1.614 in). The width measures 18 mm (0.709 in).
- The rear output shaft bearing assembly surface on the rear output shaft measures 41 mm (1.614 in).
- The control lever is thicker than the MP 3023 ATC, measuring 10.5 mm (0.413 in) between the bearing surfaces.
- The control actuator lever is thicker than the MP 3023 ATC, measuring 10.5 mm (0.413 in) between the bearing surfaces.
- The control actuator lever balls are smaller than the MP 3023 ATC, measuring 10 mm (0.394 in) in diameter.
- The control actuator lever washer is thicker than the MP 3023 ATC, measuring 2.5 mm (0.098 in).

ALL

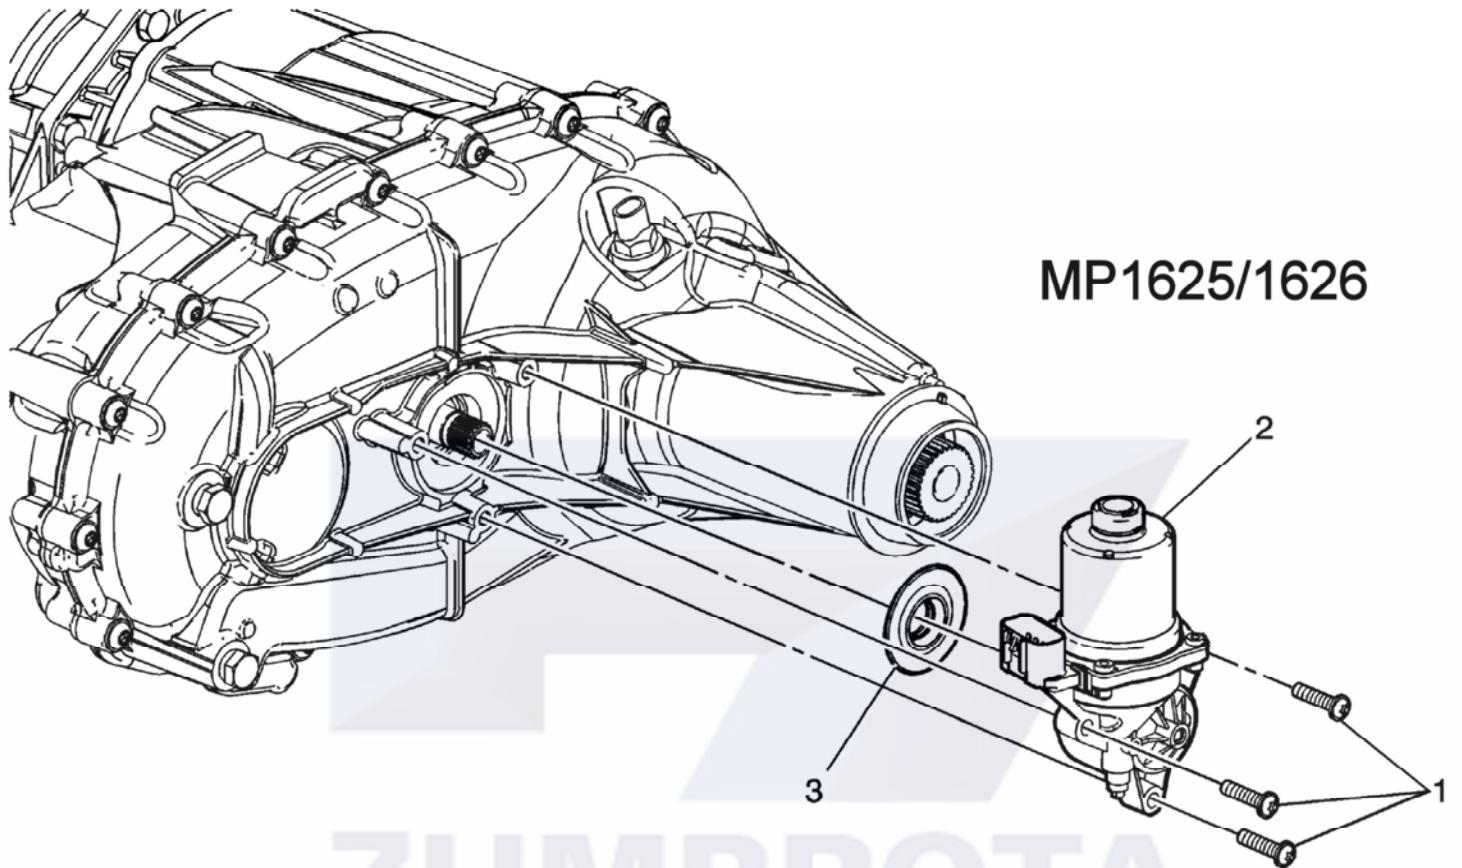

- Double lip input shaft oil seals are used on applications with a WET adapter cavity and with 4 speed transmission RPOs M30/M70/MW7/M99/ML9.
- Single lip input shaft oil seals are used on applications with a DRY adapter cavity and with 6 speed transmission RPOs MYC/MYD.

MP 3010 ATC Variations

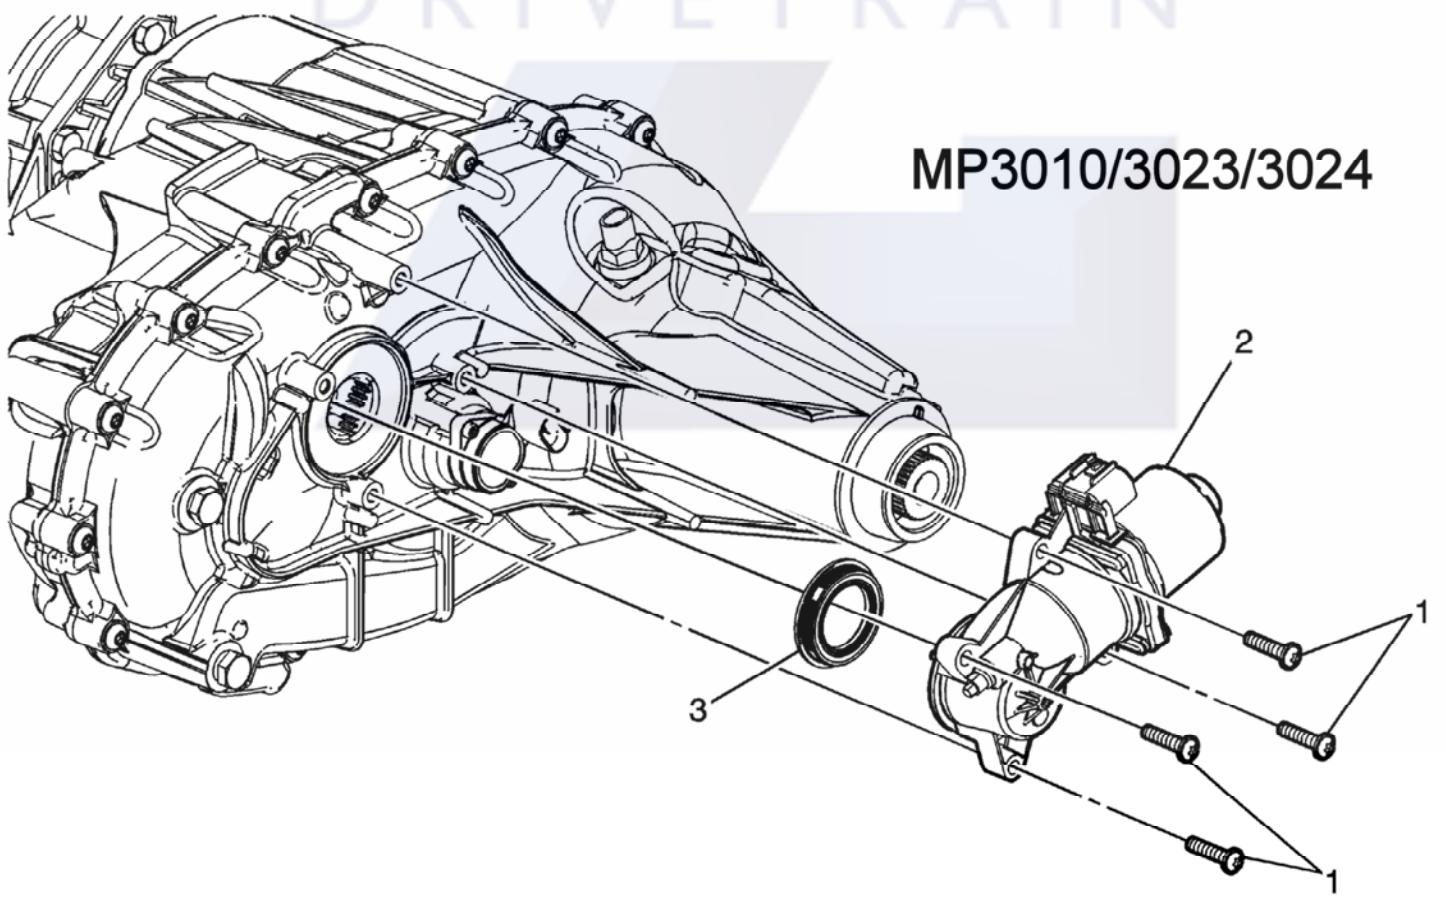

Model	Transmission	Input Shaft	Output Shaft	Chain Size	Chain Series	Hi/Low Planetary	Application
MP 3010 ATC	MYC - 6L80	32T Spline	32T Spline	7/16 x 1.25 in	9600 Series Rocker Pin Chain	N/A	K1

All Applications

- Double lip input shaft oil seals are used on applications with a WET adapter cavity and with 4 speed transmission RPOs M30/M70/MW7/M99/ML9 only.
- Single lip input shaft oil seals are used on applications with a DRY adapter cavity and with 6 speed transmission RPOs MYC/MYD only.
